U.S. Patent Application S.N. 09/446,630 AMENDMENT

PATENT

Sulia

ranging from a few days to several years, and which in its solid state is a mechanically strong plastic or rubbery material, and

- a bioactive component, which is a bioactive glass or a bioactive xerogel,

such that the plasticized thermoplastic component remains moldable for a certain period even after the temperature of the composite has been lowered to a temperature which is considerably lower than the setting temperature of said thermoplastic component.

## Please add new claims 18 and 19 as follows:

(New) The composite of claim 1, wherein the plasticized thermoplastic component remains moldable for a certain period even after the temperature of the composite has been lowered to a temperature approximately 10 to 15°C lower than the setting temperature of said thermoplastic component.

(New) The composite of claim 1, wherein said certain period is from 15 seconds to 30 minutes.
